

ANCHOR: <a>

WHAT IT DOES:

- Turns the text inside the tags into a hyperlink to the specified URL.

ATTRIBUTES:

- href: The URL you want your text to link to.
 - This can be a local file (e.g., another HTML file stored on your computer), or it can be the URL for a web page on the Internet.

WHAT THE HTML LOOKS LIKE...

IN A TEXT EDITOR

```
My favorite website is <a href="https://tumblr.com">Tumblr!</a>
```

IN A WEB BROWSER

My favorite website is [Tumblr!](https://tumblr.com)

DIVIDER: <div>

WHAT IT DOES:

- Defines a section in your HTML document.
 - (This becomes helpful when it's time to style your page!)

ATTRIBUTES:

- None

WHAT THE HTML LOOKS LIKE...

IN A TEXT EDITOR

```
<div>
  This is the first section!
</div>
<div>
  This is the second section!
</div>
```

IN A WEB BROWSER

This is the first section!
This is the second section!

IMAGE:

WHAT IT DOES:

- Loads an image in your page.

ATTRIBUTES:

- `src`: The URL of the image you want to load.
 - This can be a local file (e.g., an image stored on your computer), or it can be the URL for an image on the Internet.
